RE: Nolan.UDA Horizon Mesh

When fabricating Ziptrak® blinds, it's vital that a premium fabric is used to compliment the Ziptrak® quality. More specifically, it must have excellent lay-flat characteristics, weld easily and have a consistent weave and visual appearance.

Ziptrak® has been using the Horizon Mesh Collection, available through Nolan.UDA, for several years. Both Horizon 95 and 99 have proven to work seamlessly with the Ziptrak® system and the Colorbond® colour palette compliments the Ziptrak® offering perfectly. Furthermore the privacy and protection performance attributes of Horizon satisfy all the criteria to ensure a functional and effective outdoor blind system.

After working with Horizon products, our experience is that the welding process is smooth and consistent. The fabric features all the physical attributes to ensure consumer confidence and peace of mind. Ziptrak® not only uses Horizon mesh for our outdoor blind fabrication, but we also have no hesitation in recommending it to our network of Ziptrak® fabricators.
